Coding Intelligence Platform

Trusted coding intelligence, now unified in one modern platform.

Coding is changing. So are the tools behind it.

Health care organizations depend on accurate, up-to-date medical coding to help drive compliant documentation, accurate claim submission and reliable automation. Yet maintaining licensed content, keeping pace with constant updates, and applying coding rules correctly across workflows requires extensive resources. It's also complex and expensive.

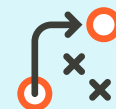

Optum® Coding Intelligence Platform (OCIP) helps accelerate compliance review, productivity and accurate reimbursement with licensed, clinically governed coding content you can trust. The OCIP delivers assistive content that's compatible with how your teams work, wherever you need it. It can be delivered through a cloud application, embedded application or content APIs that fit into your workflows or data files.

The platform offers a single trusted source of truth for a sizable library of coding and administrative guidance across documentation, billing, claims, analytics and AI-driven workflows. Users spend less time searching for guidance to allow them to focus on complete and accurate coding.

What to expect

This modern platform is built around coding, billing, review and integration workflows.

- ✔ **One modern platform experience:**
Familiar coding content, tools and resources brought together in one configurable platform. OCIP is designed to support your teams across facility, physician, ASC, payer and government settings while reducing the need to move between separate applications and logins.
- ✔ **Built to support AI and automation:**
Structured, clinically governed coding content designed to support AI-driven coding, documentation and automation workflows, helping you prepare for what's next with a stronger foundation for accuracy and reliability.
- ✔ **A connected coding community:**
Community collaboration available directly within the platform, helping you ask questions, share insights and learn from peers and Optum experts without disrupting your workflow.

Built around your workflow

Coding guidance available through a cloud-based web application, embedded experiences or content APIs, helping you deliver trusted information directly within the workflows and systems your teams already use.

Cloud-based application

Access coding intelligence through a modern web-based platform experience.

Content APIs and data files

Integrate trusted coding intelligence into applications, APIs, automation and AI-enabled workflows.

Designed for

Providers, hospitals and health systems

Access trusted, clinically governed coding intelligence at the point of documentation and billing to help improve accuracy, reduce denials and streamline professional and technical revenue cycle workflows.

Payers

Apply consistent, licensed coding intelligence across claims adjudication, utilization management and policy enforcement. This helps reduce rework, improve decision accuracy and support scalable automation.

EMR/EHR and technology vendors

Embed licensed coding intelligence directly into workflows to help enable compliant AI, accelerate product innovation, and power automation at scale. Remove the burden of content maintenance with all the benefits of content driven by hundreds of coding resources.
