Introduction	1	Transcatheter Endovascular Revascularization— Overview	135
CPT Codes and Descriptions	1	Transcatheter Endovascular Revascularization— Iliac Vascular Territory	138
Procedure Codes	3	Transcatheter Endovascular Revascularization—Femoral/Popliteal Vascular Territory	143
Chapter 1: The Basics	7	Transcatheter Endovascular Revascularization—Tibial/Peroneal Vascular Territory	147
APC Basics—Why are they important?	7	Endovenous Arterial Revascularization—Femoral- Popliteal Artery	151
CCI Edits—Why are they important?	11	Endovascular Venous Arterialization (PDVA)— Tibial/Peroneal Vein	153
Recovery Audit Contractors (RAC)	12	Transluminal Atherectomy for Supra-Inguinal Arteries	156
Coding Basics	12	Endovascular Transluminal Angioplasty—Visceral and Brachiocephalic Arteries, Aorta	160
General Coding Guidelines	12	Endovascular Transluminal Angioplasty— Venous System	166
Modifiers for Outpatient Hospital Radiology and Cardiology Procedures	13	Transcatheter Stent Placement—Visceral and Brachiocephalic Arteries; Venous System	169
Modifiers for Physician Services	15	Chapter 6: Neurovascular Interventions	175
Revenue Codes	18	Cerebral Endovascular Therapeutic Interventions	175
General Interventional Radiology Coding Guidelines for Selective and Nonselective Catheter Placements	20	Percutaneous Embolization—Cerebral (Extracranial and Intracranial)	178
Catheter Placement Codes for Interventional Radiology	21	Temporary Balloon Occlusion	184
General Cardiac Procedure Coding Guidelines	23	Percutaneous Intracranial Angioplasty	186
Documentation	23	Transcatheter Vascular Stent Placement— Cervical Carotid	190
Supply Device Codes	24	Transcatheter Vascular Stent Placement—Intracranial	196
Stark/Anti-Kickback Legislation	24	Transcatheter Vascular Stent Placement—Extracranial Vertebral or Intrathoracic Carotid Artery	201
Stark Self-Referral Regulations	24	Chapter 7: Vascular Access Device Placement and Therapy	205
Chapter 2: Diagnostic Angiography	27	Non-Tunneled Vascular Access Device Placement	206
Cervicocerebral Angiography—Carotid and Vertebral Arteries	27	Tunneled Vascular Access Device Placement	210
Aorta Angiography—Thoracic and Abdominal	33	Repair/Replacement/Removal of Vascular Access Device	214
Internal Mammary and Spinal Angiography	37	Maintenance of Vascular Access Device	221
Visceral Angiography—Celiac, Hepatic, Splenic, Inferior Phrenic, Superior and Inferior Mesenteric Arteries, and Bronchial Arteries	42	Chapter 8: Minor Interventional Procedures	225
Renal Angiography	49	Arthrography	225
Adrenal Angiography	54	Image-Guided Interventional Procedures— Breast Localization	228
Extremity Angiography	58	Image-Guided Interventional Procedures— Breast Biopsy	231
Pelvic Artery Angiography	63	Image-Guided Interventional Procedures— Breast, Other Than Biopsy	234
Pulmonary Artery Angiography	66	Breast Ablation	237
Chapter 3: Diagnostic Venography	71	Percutaneous Core Needle Biopsy—Lung or Mediastinum	239
Cerebral Veins	71	Other Biopsy Procedures	242
Central Veins—Superior and Inferior Vena Cava	74	Aspiration Procedures	246
Renal and Adrenal Veins	77	Image Guided Drainage Procedures	250
Extremity Veins	80	Pericardiocentesis and Drainage	256
Portal and Hepatic Veins and TIPS	83	Spinal Puncture and Drainage	259
Venous Sampling	89	Spinal Injections and Infusions	262
Chapter 4: Dialysis Circuit Interventions	91	Discography	268
Arteriovenous Fistula (Dialysis Circuit) Diagnostic Angiography	91	Sclerotherapy of a Fluid Collection	272
Arteriovenous Fistula (Dialysis Circuit) Angioplasty and Stenting	94	Endovenous Ablation Therapy	275
Arteriovenous Fistula (Dialysis Circuit) Thrombectomy	99		
Arteriovenous Fistula (Dialysis Circuit) Embolization	103		
Chapter 5: Vascular Interventions	107		
Percutaneous Embolization—Other than Cerebral, Head and Neck	107		
Transcatheter Thrombolysis Other Than Intracranial	113		
Percutaneous Thrombectomy	116		
Percutaneous Vascular Filter Placement, Repositioning, and Removal	121		
Percutaneous Transcatheter Retrieval of Foreign Body	126		
Intravascular Ultrasound, Non-coronary	129		
Transcatheter Biopsy	132		

Endovenous Chemical Ablation Therapy	280	Endomyocardial Biopsy	430
Stab Phlebectomy	283	Catheter Closure of Atrial Septal Defect/Ventricular Septal Defect	432
Venous Sclerotherapy	286	Catheter Closure of Patent Ductus Arteriosus	434
Sacroplasty	289	Percutaneous Transcatheter Septal Reduction Therapy	436
Vertebroplasty	291	Catheter Delivered Implantation of Aortic Valve Prostheses (TAVR)	438
Kyphoplasty	293	Catheter Delivered Implantation (Repair) of Mitral Valve	442
Myelography	295	Transcatheter Repair—Mitral Valve via Coronary Sinus	444
Chapter 9: Gastrointestinal Tract Interventions	299	Catheter Delivered Implantation of Pulmonary Valve Prostheses (TPVI)	445
Percutaneous Cholecystostomy	299	Percutaneous Transcatheter Closure of Left Atrial Appendage	448
Percutaneous Cholangiography	302	Transcatheter Closure of Paravalvular Leak	450
Biliary/Drainage Catheter Placement	306	Transcatheter Valve Reconstruction—Mitral and Tricuspid	452
Conversion/Exchange and Removal of Biliary Stent/Drainage Catheter	311	Transcatheter Implantation/Replacement—Tricuspid Valve	455
Biliary Stent Placement/Drainage	315	Transcatheter Implantation/Replacement—Mitral Valve	457
Other Biliary Procedures	320	Transcatheter Valve Repair—Tricuspid (TTVr)	459
Esophageal Dilation	323	Transcatheter Implantation Left Ventricular Restoration Device	461
Percutaneous Transhepatic Biliary Duct Dilation and Stent Placement	325	Transcatheter Implantation Coronary Sinus Reduction Device	463
Percutaneous Gastrostomy Tube Placement	329	Chapter 13: Pacemaker Insertion and Pacing Cardioverter-Defibrillator Procedures	465
CCI Edits	330	General Guidelines	465
Percutaneous Jejunostomy or Duodenostomy Tube Placement	331	Epicardial Electrode Insertion—Permanent Pacemaker or ICD (Cardioverter-Defibrillator)	466
Percutaneous Cecostomy Tube Placement	333	Insertion of New or Replacement of Permanent Pacemaker Plus Electrode Insertion	468
Conversion of Gastrostomy (G tube) to Jejunostomy (G-J tube)	335	Insertion or Replacement of Temporary Pacemaker	473
Replacement and Maintenance of Gastrointestinal System Tubes	337	Insertion of Pulse Generator Only	476
Chapter 10: Urinary Tract Diagnostics and Interventions	343	Upgrade of Single Chamber Pacemaker System	479
Nephrostogram	343	Electrode Repositioning	482
Ureterogram Through Existing Access	348	Insertion of Transvenous Electrode(s)	484
Percutaneous Placement of Nephrostomy Tube	350	Repair of Transvenous Electrode(s)	488
Percutaneous Placement Nephroureteral Catheter	354	Pocket Relocation	490
Ureteral Stent Placement	358	Insertion of Electrode for Left Ventricular Pacing (Previously placed pacemaker or ICD)	492
Ureteral Dilation	363	Insertion of Electrode for Left Ventricular Pacing at the Same Time as Primary Procedure	496
Ureteral Embolization or Occlusion	365	Reposition Previously Placed Left Ventricular Electrode	498
Renal or Ureteral Catheter Removal	367	Removal and Replacement of Pacemaker Generator	500
Chapter 11: Diagnostic Cardiac Catheterization	373	Removal of Permanent Pacemaker Generator	502
Noncongenital Cardiac Catheterization	376	Removal of Pacemaker Electrode(s)	504
Heart Catheterization Procedures for Congenital Heart Defects	383	Removal of Epicardial Pacemaker System by Thoracotomy	506
Chapter 12: Cardiac Interventional Procedures	389	Removal of Permanent Electrode(s) by Thoracotomy	508
Intra Aortic Balloon Pump Procedures—Percutaneous	389	Insertion of Implantable Defibrillator Generator	510
Ventricular Assist Device—Percutaneous Insertion	394	Removal of Implantable Defibrillator Generator	514
Ventricular Assist Device—Removal of Percutaneous Device	397	Removal and Replacement of Implantable Defibrillator Generator	515
Ventricular Assist Device—Repositioning of Percutaneous Device	399	Removal of Implantable Defibrillator Electrode(s)	519
Endovascular Repair of Congenital Heart and Vascular Defects	400	Insertion or Replacement of ICD Lead(s) and Generator	521
Coronary Thrombectomy	402	Leadless Pacemaker System	525
Intravascular Brachytherapy	404	Subcutaneous ICD System Procedures (S-ICD)	529
Coronary Thrombolysis	405	Transcatheter Implantation of Hemodynamic Monitor	534
Intravascular Coronary Ultrasound (IVUS)	407	Wireless Cardiac Stimulator—Insertion and Removal/Replacement	536
Implantation of Wireless Pulmonary Artery Pressure Sensor	410	Implantable Cardioverter-Defibrillator with Substernal Electrode	540
Percutaneous Coronary Interventions	412		
Interventional Coronary Artery Case Examples	418		
Percutaneous Balloon Valvuloplasty	420		
Transvenous Atrial Septectomy/Septostomy	424		
Percutaneous Transluminal Pulmonary Artery Angioplasty	428

SAMPLE

Percutaneous Vascular Filter Placement, Repositioning, and Removal

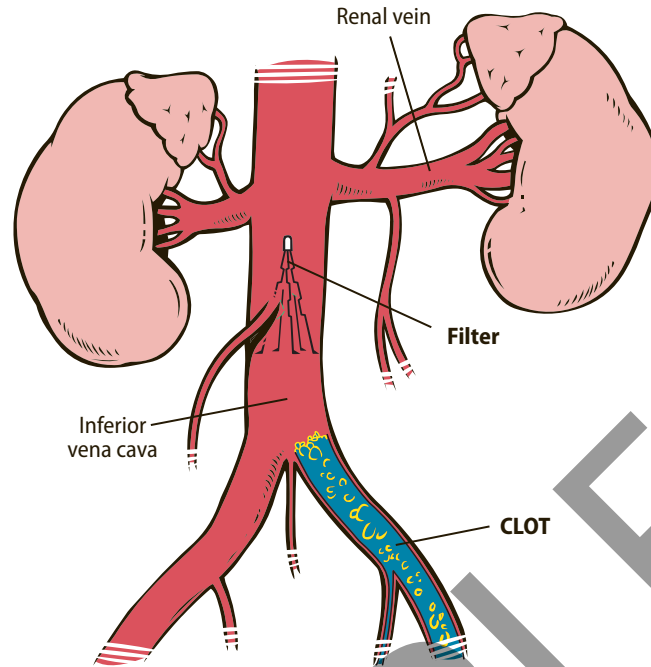

Vascular filters are placed in the inferior vena cava (IVC) in patients at risk of pulmonary embolism from known deep vein thrombosis. In the interventional radiology area, these filters are placed via percutaneous transcatheter approach. Special catheters containing a pre-loaded filter are inserted into the IVC via femoral vein or internal jugular approach and the filter is deployed. The filter grips the walls of the vena cava and is designed to “catch” clots migrating from the lower extremities. Filters may be temporary or permanent.

- 37191** **Insertion of intravascular vena cava filter, endovascular approach including vascular access, vessel selection, and radiological supervision and interpretation, intraprocedural roadmapping, and imaging guidance (ultrasound and fluoroscopy), when performed**
- 37192** **Repositioning of intravascular vena cava filter, endovascular approach including vascular access, vessel selection, and radiological supervision and interpretation, intraprocedural roadmapping, and imaging guidance (ultrasound and fluoroscopy), when performed**
- 37193** **Retrieval of intravascular vena cava filter, endovascular approach including vascular access, vessel selection, and radiological supervision and interpretation, intraprocedural roadmapping, and imaging guidance (ultrasound and fluoroscopy), when performed**
 A filter is placed into the inferior vena cava percutaneously, usually through the right internal jugular vein. Fluoroscopy is used to monitor and guide the process. An incision is made just above the clavicle and then another small incision is made into the vein once it is identified. A catheter loaded with the filter is inserted into the vein and threaded through until it reaches the inferior vena cava. The filter is released from the catheter and opens to fill the diameter and grip the walls of the vena cava. The filter-loaded catheter may also be advanced over a guidewire to the vena cava after needle puncture of the internal jugular vein.

Central Venous Anatomy

IVC Filter Placement

CPT Coding for IVC Filter Procedures

Service Performed	Code Reported
IVC filter placement	37191
IVC filter repositioning	37192
IVC filter removal	37193

Coding Tips

1. These codes are comprehensive codes. Component coding no longer applies.
2. Catheter placement is included in codes 37191–37193 and is not reported separately.
3. Intravascular ultrasound is included in these procedures. Do not separately report 37252 or 37253.
4. Report diagnostic inferior vena cavagram with CPT code 75825 only when performed for diagnostic purposes and results are used to make the clinical decision to proceed with filter placement. Append modifier 59 or appropriate X modifier.
5. Temporary and permanent filter placement is coded in the same manner.
6. Report the procedure to reposition a previously placed filter with CPT code 37192. This repositioning must be a separately documented procedure.
7. Report the procedure to remove a previously placed filter with CPT code 37193.
8. Conscious sedation is not included in these codes. Separately report 99151–99157 per payer policy and coding guidelines. Hospitals may choose to include the costs associated with the service as part of the procedure rather than reporting them separately.
9. Report the applicable device codes (HCPCS codes) in addition to the procedure code. Refer to the HCPCS section below for possible codes.
10. Hospitals are requested to continue reporting low osmolar contrast media separately with HCPCS Level II codes Q9965–Q9967. Report contrast media by milliliter rather than by bottle or other unit.

Facility HCPCS Coding

Some applicable codes may include but are not limited to:

- C1773 Retrieval device, insertable
- C1880 Vena cava filter
- Q9965 LOCM, 100-199 mg/ml iodine concentration, per ml
- Q9966 LOCM, 200-299 mg/ml iodine concentration, per ml
- Q9967 LOCM, 300-399 mg/ml iodine concentration, per ml

Endovascular Transluminal Angioplasty—Visceral and Brachiocephalic Arteries, Aorta

Angioplasty is a common procedure performed to improve blood flow in arteries or veins that have become narrowed or blocked. In the interventional radiology area, these procedures are performed by percutaneous technique using specially designed balloon catheters. They may also be performed in a surgical setting using either an open approach or a percutaneous approach.

37246 Transluminal balloon angioplasty (except lower extremity artery(ies) for occlusive disease, intracranial, coronary, pulmonary, or dialysis circuit), open or percutaneous, including all imaging and radiological supervision and interpretation necessary to perform the angioplasty within the same artery; initial artery

37247 each additional artery (List separately in addition to code for primary procedure)
 A narrowing or stricture of a peripheral artery is stretched to allow a normal flow of blood. A local anesthetic is applied over the access site, usually the femoral artery, and the skin is percutaneously punctured with a needle. A guidewire is inserted and fed through the blood vessel and the needle is removed. A catheter with a deflated balloon is then advanced over the guidewire to the narrowed portion of the vessel. The balloon is inflated to stretch the vessel to a larger diameter allowing a more normal flow of blood. Several inflations may be performed along the narrowed area. Transluminal angioplasty may be done through an incision in the skin overlying the artery of access. Vessel clamps are applied and then the artery is nicked to create an opening for the balloon catheter.

Angioplasty
