### **AHA Coding Clinic Citations**

Coding Clinics are official American Hospital Association (AHA) publications that provide coding advice specific to ICD-10-CM and ICD-10-PCS.

Coding Clinic citations included in this manual are current up to the second quarter of 2022.

These citations identify the year, guarter, and page number of one or more Coding Clinic publications that may have coding advice relevant to a particular code or group of codes. With the most current citation listed first, these notations are preceded by the symbol AHA: and appear in purple type.

l15.1 Hypertension secondary to other renal disorders AHA: 2016, 3Q, 22

### Definitions

Definitions explain a specific term, condition, or disease process in layman's terms. These notations are preceded by the symbol DEF: and appear in purple type.

### M51.4 Schmorl's nodes

DEF: Irregular bone defect in the margin of the vertebral body that causes herniation into the end plate of the vertebral body

### **Coding Tips**

The tips in the tabular list offer coding advice that is not readily available within the ICD-10-CM classification. It may relate official coding guidelines, indexing nuances, or advice from AHA's Coding Clinic for ICD-10-CM/PCS. These notations are preceded by the symbol TIP: and appear in brown type.

> B97.2 Coronavirus as the cause of diseases classified elsewhere TIP: Do not report a code from this subcategory for COVID-19, refer to UØ7.1.

## lcons

Note: The following icons are placed to the left of the code.

Changes to ICD-10-CM codes, since the last published edition of this manual, are highlighted in two ways:

The following green icons identify new or revised codes effective April 1, 2022:

- New Code Midyear
- **Revised Code Midyear**

The following black icons identify new or revised codes effective October 1,2022:

- **New Code**
- **Revised Code**

#### **Additional Characters Required** $\checkmark$

This symbol indicates that the code requires a 4th character.

This symbol indicates that the code requires a 5th character.

- This symbol indicates that the code requires a 6th character.
- This symbol indicates that the code requires a 7th character.

H6Ø.3 Other infective otitis externa H60.31 Diffuse otitis externa

- - H6Ø.311 Diffuse otitis externa, right ear H6Ø.312 Diffuse otitis externa, left ear
  - H60.313 Diffuse otitis externa, bilateral
  - H60.319 Diffuse otitis externa, unspecified ear

#### √x 7<sup>th</sup> **Placeholder Alert**

This symbol indicates that the code requires a 7th character following the placeholder "X". Codes with fewer than six characters that require a 7th character must contain placeholder "X" to fill in the empty character(s).

T16.1 Foreign body in right ear

This manual provides the most current information that was available at the time of publication. Except where otherwise noted, the icons and/or color bars reflect edits provided in the Integrated Outpatient Code Editor (IOCE) quarterly files utilized under the outpatient prospective payment system (OPPS). Because the October 2022 guarterly files were not available at the time this book was printed, the edits in this manual are based on the July 2022 quarterly files.

Note: In an effort to provide the most current edit information, Optum has provided a searchable data file that includes the final edit designations for all ICD-10-CM codes based on the IOCE October 2022 quarterly files. The edits included in the data file are as follows:

- Age
- Sex
- Manifestation
- Unacceptable principal diagnosis

This data file can be accessed at the following:

https://www.optumcoding.com/ProductUpdates/

Title: "2023 ICD-10-CM Outpatient Edits Data File"

Password: Provider23

Note: The following icons are placed at the end of the code description.

### Age Edits

### Newborn Age: 0

These diagnoses are intended for newborns and neonates and the patient's age must be 0 years.

N47.Ø Adherent prepuce, newborn

#### Ρ Pediatric Age: 0-17

These diagnoses are intended for children and the patient's age must be between 0 and 17 years.

L21.1 Seborrheic infantile dermatitis

#### М Maternity Age: 9-64

These diagnoses are intended for childbearing patients between the age of 9 and 64 years.

OØ2.9 Abnormal product of conception, unspecified

#### Α Adult Age: 15-124

These diagnoses are intended for patients between the age of 15 and 124 years.

Α R54 Age-related physical debility Frailty Old age Senescence Senile asthenia Senile debility **EXCLUDES 1** age-related cognitive decline (R41.81) sarcopenia (M62.84) senile psychosis (FØ3) senility NOS (R41.81)

# **Chapter-Level Notations**

### **Chapter-specific Guidelines with Coding Examples**

Each chapter begins with the Official Guidelines for Coding and Reporting specific to that chapter, where provided. Coding examples specific to outpatient care settings have been provided to illustrate the coding and/or sequencing guidance in these guidelines.

### **Muscle and Tendon Table**

ICD-10-CM categorizes certain muscles and tendons in the upper and lower extremities by their action (e.g., extension or flexion) as well as their anatomical location. The Muscle/Tendon table is provided at the beginning of chapter 13 and chapter 19 to help users when code selection depends on the action of the muscle and/or tendon.

**Note:** This table is not all-inclusive, and proper code assignment should be based on the provider's documentation.

# Illustrations

This section includes illustrations of normal anatomy with ICD-10-CM-specific terminology.

Neoplasm Table

**Chapter 2. Neoplasms** 

HCC Rx ESR COM

# Chapter 2. Neoplasms (CØØ-D49)

### NOTE

### Functional activity

All neoplasms are classified in this chapter, whether they are functionally active or not. An additional code from Chapter 4 may be used, to identify functional activity associated with any neoplasm.

### Morphology [Histology]

Chapter 2 classifies neoplasms primarily by site (topography), with broad groupings for behavior, malignant, in situ, benign, etc. The Table of Neoplasms should be used to identify the correct topography code. In a few cases, such as for malignant melanoma and certain neuroendocrine tumors, the morphology (histologic type) is included in the category and codes.

### Primary malignant neoplasms overlapping site boundaries

A primary malignant neoplasm that overlaps two or more contiguous (next to each other) sites should be classified to the subcategory/code .8 ("overlapping lesion"), unless the combination is specifically indexed elsewhere. For multiple neoplasms of the same site that are not contiguous, such as tumors in different quadrants of the same breast, codes for each site should be assigned.

### Malignant neoplasm of ectopic tissue

Malignant neoplasms of ectopic tissue are to be coded to the site mentioned, e.g., ectopic pancreatic malignant neoplasms are coded to pancreas, unspecified (C25.9).

### AHA: 2017,4Q,103; 2017,1Q,4,5-6,8

This chapter contains the following blocks:

- CØØ-C14 Malignant neoplasms of lip, oral cavity and pharynx
- C15-C26 Malignant neoplasms of digestive organs
- Malignant neoplasms of respiratory and intrathoracic organs Malignant neoplasms of bone and articular cartilage C3Ø-C39
- C4Ø-C41
- C43-C44 Melanoma and other malignant neoplasms of skin
- C45-C49 Malignant neoplasms of mesothelial and soft tissue
- Malignant neoplasms of breast C5Ø
- C51-C58 Malignant neoplasms of female genital organs
- C6Ø-C63 Malignant neoplasms of male genital organs
- C64-C68 Malignant neoplasms of urinary tract
- C69-C72 Malignant neoplasms of eye, brain and other parts of central nervous system
- C73-C75 Malignant neoplasms of thyroid and other endocrine glands C7A Malignant neuroendocrine tumors
- C7B Secondary neuroendocrine tumors
- C76-C8Ø Malignant neoplasms of ill-defined, other secondary and unspecified sites
- C81-C96 Malignant neoplasms of lymphoid, hematopoietic and related tissue DØØ-DØ9 In situ neoplasms
- Benign neoplasms, except benign neuroendocrine tumors D1Ø-D36
- Benign neuroendocrine tumors D3A
- D37-D48 Neoplasms of uncertain behavior, polycythemia vera and myelodysplastic syndromes
- D49 Neoplasms of unspecified behavior

### **MALIGNANT NEOPLASMS (CØØ-C96)**

Malignant neoplasms, stated or presumed to be primary (of specified sites), and certain specified histologies, except neuroendocrine, and of lymphoid, hematopoietic and related tissue (CØØ-C75)

### AHA: 2022, 1Q, 16

TIP: Codes from this code block can be assigned for outpatient encounters based on the diagnosis listed in a pathology or cytology report when authenticated by a pathologist and available at the time of code assignment.

Malignant neoplasms of lip, oral cavity and pharynx (CØØ-C14)

# Chapter 4. Endocrine, Nutritional, and Metabolic Diseases (EØØ–E89)

### Chapter-specific Guidelines with Coding Examples

The chapter-specific guidelines from the ICD-10-CM Official Guidelines for Coding and Reporting have been provided below. Along with these guidelines are coding examples, contained in the shaded boxes, that have been developed to help illustrate the coding and/or sequencing guidance found in these quidelines.

### a. Diabetes mellitus

The diabetes mellitus codes are combination codes that include the type of diabetes mellitus, the body system affected, and the complications affecting that body system. As many codes within a particular category as are necessary to describe all of the complications of the disease may be used. They should be sequenced based on the reason for a particular encounter. Assign as many codes from categories EØ8-E13 as needed to identify all of the associated conditions that the patient has.

Patient is seen for uncontrolled diabetes, type 2, with hyperglycemia diabetic nephropathy, and diabetic gastroparesis

- Type 2 diabetes mellitus with hyperglycemia E11.65
- E11.21 Type 2 diabetes mellitus with diabetic nephropathy
- E11.43 Type 2 diabetes mellitus with diabetic autonomic (poly)neuropathy

#### K31.84 Gastroparesis

Explanation: Use as many codes to describe the diabetic complications as needed. Many are combination codes that describe more than one condition. Code first the reason for the encounter. The term "uncontrolled" can refer to either hyperglycemia or hypoglycemia. In this case, "uncontrolled" is described as "with hyperglycemia."

### 1) Type of diabetes

The age of a patient is not the sole determining factor, though most type 1 diabetics develop the condition before reaching puberty. For this reason, type 1 diabetes mellitus is also referred to as juvenile diabetes

A 45-year-old patient is diagnosed with type 1 diabetes

#### Type 1 diabetes mellitus without complications E10.9

Explanation: Although most type 1 diabetics are diagnosed in childhood or adolescence, it can also begin in adults.

### 2) Type of diabetes mellitus not documented

If the type of diabetes mellitus is not documented in the medical record the default is E11.-, Type 2 diabetes mellitus

Office visit lists diabetic retinopathy with macular edema and hypertension on patient problem list

#### E11.311 Type 2 diabetes mellitus with unspecified diabetic retinopathy with macular edema

#### 110 **Essential (primary) hypertension**

Explanation: Since the type of diabetes was not documented, default to category E11.

### 3) Diabetes mellitus and the use of insulin, oral hypoglycemics, and injectable non-insulin drugs

If the documentation in a medical record does not indicate the type of diabetes but does indicate that the patient uses insulin, code E11-, Type 2 diabetes mellitus, should be assigned. Additional code(s) should be assigned from category Z79 to identify the long-term (current) use of insulin, oral hypoglycemic drugs, or injectable non-insulin antidiabetic, as follows:

If the patient is treated with both oral hypoglycemic drugs and insulin, both code Z79.4, Long term (current) use of insulin, and code Z79.84, Long term (current) use of oral hypoglycemic drugs, should be assigned.

If the patient is treated with both insulin and an injectable non-insulin antidiabetic drug, assign codes Z79.4, Long term (current) use of insulin, and Z79.85, Long-term (current) use of injectable non-insulin antidiabetic drugs.

If the patient is treated with both oral hypoglycemic drugs and an injectable non-insulin antidiabetic drug, assign codes Z79.84, Long term (current) use of oral hypoglycemic drugs, and Z79.85, Long-term (current) use of injectable non-insulin antidiabetic drugs.

### Code Z79.4 should not be assigned if insulin is given temporarily to bring a type 2 patient's blood sugar under control during an encounter.

Office visit lists chronic diabetes with daily insulin use on patient problem list

#### E11.9 Type 2 diabetes mellitus without complications

#### Z79.4 Long term (current) use of insulin

Explanation: Do not assume that a patient on insulin must have type 1 diabetes. The default for diabetes without further specification defaults to type 2. Add the code for long term use of insulin.

4) Diabetes mellitus in pregnancy and gestational diabetes See Section I.C.15. Diabetes mellitus in pregnancy.

See Section I.C.15. Gestational (pregnancy induced) diabetes

5) Complications due to insulin pump malfunction (a) Underdose of insulin due to insulin pump failure

> An underdose of insulin due to an insulin pump failure should be assigned to a code from subcategory T85.6, Mechanical complication of other specified internal and external prosthetic devices, implants and grafts, that specifies the type of pump malfunction, as the principal or first-listed code, followed by code T38.3X6-, Underdosing of insulin and oral hypoglycemic [antidiabetic] drugs. Additional codes for the type of diabetes mellitus and any associated complications due to the underdosing should also be assigned.

A 24-year-old type 1 diabetic male treated in for hyperglycemia; insulin pump found to be malfunctioning and underdosing

- T85.614A Breakdown (mechanical) of insulin pump, initial encounter
- Underdosing of insulin and oral hypoglycemic T38.3X6A [antidiabetic] drugs, initial encounter
- Type 1 diabetes mellitus with hyperglycemia E10.65

*Explanation*: The complication code for the mechanical breakdown of the pump is sequenced first, followed by the underdosing code and type of diabetes with complication. Code all other diabetic complication codes necessary to describe the patient's condition.

### (b) Overdose of insulin due to insulin pump failure

The principal or first-listed code for an encounter due to an insulin pump malfunction resulting in an overdose of insulin, should also be T85.6-, Mechanical complication of other specified internal and external prosthetic devices, implants and grafts, followed by code T38.3X1-, Poisoning by insulin and oral hypoglycemic [antidiabetic] drugs, accidental (unintentional).

A 24-year-old type 1 diabetic male found down with diabetic coma, brought into ED and treated for hypoglycemia; insulin pump found to be malfunctioning and overdosing

- T85.614A Breakdown (mechanical) of insulin pump, initial encounter
- T38.3X1A Poisoning by insulin and oral hypoglycemic [antidiabetic] drugs, accidental (unintentional), initial encounter
- E1Ø.641 Type 1 diabetes mellitus with hypoglycemia with coma

*Explanation*: The complication code for the mechanical breakdown of the pump is sequenced first, followed by the poisoning code and type of diabetes with complication. All the characters in the combination code must be used to form a valid code and to fully describe the type of diabetes, the hypoglycemia, and the coma.

### 6) Secondary diabetes mellitus

Codes under categories EØ8, Diabetes mellitus due to underlying condition, EØ9, Drug or chemical induced diabetes mellitus, and E13, Other specified diabetes mellitus, identify complications/manifestations associated with secondary diabetes mellitus. Secondary diabetes is always caused by another condition or event (e.g., cystic fibrosis,

# Chapter 6. Diseases of the Nervous System (GØØ-G99)

### **Chapter-specific Guidelines with Coding Examples**

The chapter-specific guidelines from the ICD-10-CM Official Guidelines for Coding and Reporting have been provided below. Along with these guidelines are coding examples, contained in the shaded boxes, that have been developed to help illustrate the coding and/or sequencing guidance found in these guidelines.

### a. Dominant/nondominant side

Codes from category G81, Hemiplegia and hemiparesis, and subcategories G83.1, Monoplegia of lower limb, G83.2, Monoplegia of upper limb, and G83.3, Monoplegia, unspecified, identify whether the dominant or nondominant side is affected. Should the affected side be documented, but not specified as dominant or nondominant, and the classification system does not indicate a default, code selection is as follows:

- For ambidextrous patients, the default should be dominant.
- If the left side is affected, the default is non-dominant.
- If the right side is affected, the default is dominant.

Hemiplegia affecting left side of ambidextrous patient

### G81.92 Hemiplegia, unspecified affecting left dominant side

*Explanation*: Documentation states that the left side is affected and dominant is used for ambidextrous persons.

Right spastic hemiplegia, unknown whether patient is right- or left-handed

### G81.11 Spastic hemiplegia affecting right dominant side

*Explanation*: Since it is unknown whether the patient is right- or left-handed, if the right side is affected, the default is dominant.

### b. Pain—Category G89

### 1) General coding information

Codes in category G89, Pain, not elsewhere classified, may be used in conjunction with codes from other categories and chapters to provide more detail about acute or chronic pain and neoplasm-related pain. unless otherwise indicated below.

If the pain is not specified as acute or chronic, post-thoracotomy, postprocedural, or neoplasm-related, do not assign codes from category G89.

A code from category G89 should not be assigned if the underlying (definitive) diagnosis is known, unless the reason for the encounter is pain control/management and not management of the underlying condition. When an admission or encounter is for a procedure aimed at treating the underlying condition (e.g., spinal fusion, kyphoplasty), a code for the underlying condition (e.g., vertebral fracture, spinal stenosis) should be assigned as the principal diagnosis. No code from category G89 should be assigned.

Elderly patient with back pain is admitted for outpatient kyphoplasty for age-related osteopathic compression fracture at vertebra T3

M80.08XA Age-related osteoporosis with current pathological fracture, vertebra(e), initial encounter for fracture

*Explanation*: No code is assigned for the pain as it is inherent in the underlying condition being treated.

### (a) Category G89 codes as principal or first-listed diagnosis Category G89 codes are acceptable as principal diagnosis or the

first-listed code:

• When pain control or pain management is the reason for the admission/encounter (e.g., a patient with displaced intervertebral disc, nerve impingement and severe back pain presents for injection of steroid into the spinal canal). The underlying cause of the pain should be reported as an additional diagnosis, if known.

Patient presents for steroid injection in the right elbow due to chronic pain associated with primary degenerative joint disease.

G89.29 Other chronic pain

### M19.021 Primary osteoarthritis, right elbow

*Explanation*: Since the encounter is for control of pain, not treating the underlying condition, the pain code is sequenced first followed by the underlying condition. The M25 pain code is not necessary as the underlying condition code represents the specific site.

 When a patient is admitted for the insertion of a neurostimulator for pain control, assign the appropriate pain code as the principal or first-listed diagnosis. When an admission or encounter is for a procedure aimed at treating the underlying condition and a neurostimulator is inserted for pain control during the same admission/encounter, a code for the underlying condition should be assigned as the principal diagnosis and the appropriate pain code should be assigned as a secondary diagnosis.

# (b) Use of category G89 codes in conjunction with site specific pain codes

### (i) Assigning category G89 and site-specific pain codes

Codes from category G89 may be used in conjunction with codes that identify the site of pain (including codes from chapter 18) if the category G89 code provides additional information. For example, if the code describes the site of the pain, but does not fully describe whether the pain is acute or chronic, then both codes should be assigned.

Patient is seen to evaluate chronic right knee pain

M25.561 Pain in right knee

G89.29 Other chronic pain

*Explanation*: No underlying condition has been determined yet so the pain would be the reason for the visit. The M25 pain code in this instance does not fully describe the condition as it does not represent that the pain is chronic. The G89 chronic pain code is assigned to provide specificity.

# (ii) Sequencing of category G89 codes with site-specific pain codes

The sequencing of category G89 codes with site-specific pain codes (including chapter 18 codes), is dependent on the circumstances of the encounter/admission as follows:

 If the encounter is for pain control or pain management, assign the code from category G89 followed by the code identifying the specific site of pain (e.g., encounter for pain management for acute neck pain from trauma is assigned code G89.11, Acute pain due to trauma, followed by code M54.2, Cervicalgia, to identify the site of pain).

Management of acute, traumatic left shoulder pain

G89.11 Acute pain due to trauma

### M25.512 Pain in left shoulder

*Explanation*: The reason for the encounter is to manage or control the pain, not to treat or evaluate an underlying condition. The G89 pain code is assigned as the first-listed diagnosis but in this instance does not fully describe the condition as it does not include the site and laterality. The M25 pain code is added to provide this information.

 If the encounter is for any other reason except pain control or pain management, and a related definitive diagnosis has not been established (confirmed) by the provider, assign the code for the specific site of pain first, followed by the appropriate code from category G89. **Chapter 15. Pregnancy, Childbirth and the Puerperium**
