

Work efficiently | Customize with AMA CPT® add-on modules

Work even more efficiently with in-depth AMA CPT® knowledge at your fingertips. Here are four AMA CPT® add-ons that you'll love using with Optum360® online coding tools.

AMA CPT® Add-ons

AMA CPT® Content Module

DESIGNED FOR ALL MARKETS

Item No: WA34

Available: Now

\$399.95

Single-user; multi-user licenses available

Gain unparalleled access to content from the AMA that helps provide clarity and accuracy in CPT® code reporting — available only from Optum360 and the AMA. Included are three different AMA publications:

- CPT® Assistant newsletters — all articles from every monthly edition for multiple years.
- CPT® Changes: An Insider's View — every publication from 2006 to 2019.
- AMA CPT® Knowledge Base — access thousands of questions and answers asked by AMA members and customers regarding CPT® codes and their use.

The **AMA CPT® Content Module** gives users access to these publications in their entirety as they're delivered from the AMA, without any restrictions that limit the articles associated with codes. Search by month, year, keyword, code and more. See full newsletters and get answers to tricky questions quickly and easily all in one place.

6 Coding Update: Neuromuscular Testing—Needle Electromyography Changes for 2015

In the Current Procedural Terminology (CPT®) 2015 code set, guideline revisions were made to the needle electromyography (EMG) codes with the addition of instructional notes to support these changes. Codes 95860-95887 include the interpretation of electrical waveforms measured by equipment, which produces both visible and audible components of electrical signals recorded from the muscle(s) studied by the needle electrode.

Revised Guidelines

The electromyography guidelines were revised to indicate that EMG for nonextremity muscles is reported only once per anatomic site (code 95887). The guidelines also instruct users on appropriate reporting of code 95887 for a unilateral study of the cranial nerve innervated muscles, and if performed bilaterally, the code may be reported twice. In addition, the guidelines denote the appropriateness of reporting code 95887 when a study of the cervical or lumbar paraspinal muscle(s) is performed on the same day with no corresponding limb study (codes 95885 or 95886).

EMG guidelines to identify the appropriate codes to report for these various procedures.

Clinical Example (95887 and 95908)

A 65-year-old woman has a 2-month history of right facial weakness involving the forehead, eyelid, and mouth. Needle electromyography of right cranial nerve innervated muscles (V, VII, XI, XII) and nerve conduction studies to 3-4 muscles innervated by the facial nerve are indicated to confirm the diagnosis, help establish the prognosis, and determine the need for facial nerve decompression.

Based on the clinical example above, the codes used to report these services are as indicated below.◆

95887 Needle electromyography, non-extremity (cranial nerve supplied or axial) muscle(s) done with nerve conduction, amplitude and latency/velocity study (List separately in addition to code for primary procedure)

AMA Knowledge Base search results

Don't need quite all that information?

Total CPT®

Gain online access at a great price to articles and content found in the *CPT® Assistant* coding newsletters and *CPT® Changes: An Insider's View* from the AMA. Read them in their entirety without any limiting restrictions for the articles associated with just codes.

- *CPT® Assistant* archives are sorted by article. Quickly find every article written in *CPT® Assistant* about a particular code or section of codes. Updated monthly.
- *CPT® Changes: An Insider's View* content. Everything in the best-selling book is available electronically, providing the official AMA rationales for every new, revised and deleted CPT® code and guideline for the CPT® code set through the current year.
- Code-driven search functionality. Select a CPT® code in EncoderPro.com or RevenueCyclePro.com and the *CPT® Assistant* icon will take you to the applicable references and article listings.
